Fix Gemini Context Memory:	Gemini or another AI model, if replaced , needs to be able to handle larger contexts of assignment so that it doesn't lose its way through multi-step processes.
Include PDFs in Assignment Context:	Allow uploading of PDF documents as part of the assignment context to give the AI more detailed information to work with.
Expand Caching Across API Endpoints:	Implement caching on more API endpoints (currently only one is cached) to improve performance and reduce server load.
Broaden Classroom Testing:	Conduct testing across a wider range of subjects to evaluate platform effectiveness in different educational contexts and identify discipline-specific needs.
Use Guided User Testing Scripts:	Employ structured user testing scripts to gather feedback more consistently and make comparison of insights easier.
Enhance Sentiment Analysis:	Include more diverse language patterns in sentiment analysis to improve accuracy and support further development of testing methodologies.
Initiate A/B Testing on Instructor Dashboard:	Start A/B testing on different layouts of the instructor dashboard to determine which designs are most effective for monitoring student progress and managing tasks.
